Transformaciones geométricas 3D

Integrantes:

Huaycani Gomez, Katherine Liliana

Cohaila Aquino, Yaneli Suguey

2018 - 119037

2018 - 119034

Actividad 1

- Implemente un menú donde el usuario pueda elegir qué forma dibujar cubos y pirámides. Al elegir una de estas opciones, el objeto debe dibujarse en el centro de la pantalla con un tamaño fijo. Dibuja la pirámide con una base cuadrada como en la figura de abajo.
- Implemente transformaciones geométricas 3D de traslación, escala y rotación en los puntos de los objetos creados.
- Observación: En lugar de rotar con las teclas direccionales, utilice las letras x, s y z para rotar alrededor de los respectivos ejes. Los sentidos de giro se pueden modificar utilizando, por ejemplo, x para el sentido de las agujas del reloj y s para el sentido contrario a las agujas del reloj. Las transformaciones de escala y traslación deben continuar usando los mismos accesos directos (+ y - para la escala y el clic del mouse para la traslación).

Intento 1

Con matrices de Transformaciones geométricas 3D de openGl

```
//Librerias
